WEATHER OF CONCERN

Weather of Concern

- Moderate to locally strong Santa Ana winds will create critical fire weather conditions today and tomorrow for San Diego County and Riverside County valleys and foothills.

Active Weather Warnings, Watches and Advisories by County:

http://www.wrh.noaa.gov/sto/brief/www_bc_cal.php

WEATHER SYNOPSIS BY REGION

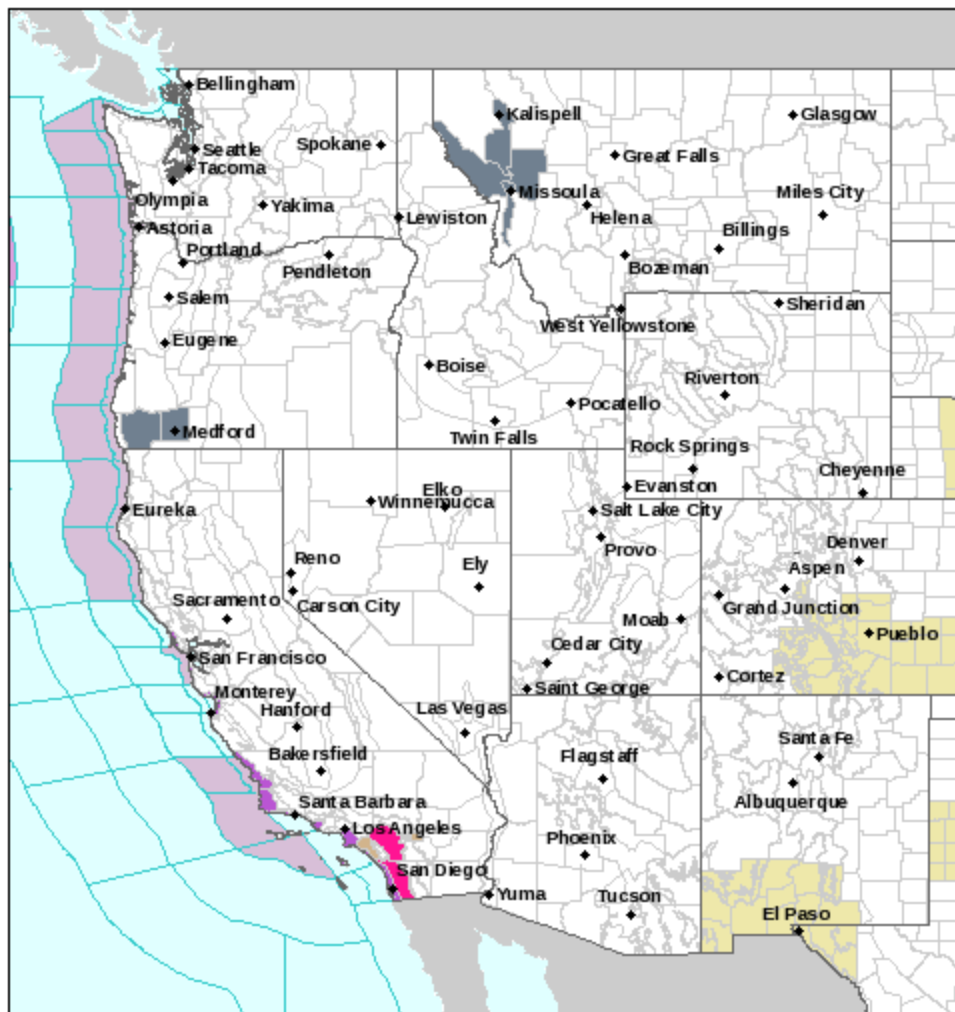

NORTHERN CALIFORNIA

For the next several days high pressure will be over the Great Basin and Southern California and a low pressure trough will be over the eastern Pacific. This pattern will produce a steady southwest flow aloft over the region through Monday. For much of this time mild, dry and stable conditions will prevail and winds will be fairly light. Variable high cloudiness can be expected, and low spots from the Sacramento Valley to the coast will see patchy morning fog and low stratus. Strong inversions will form in many valleys and canyons as well. The exception to this pattern will come late Friday and Saturday when a weak frontal system moves through the trough to coastal areas with light to brief moderate rainfall. Light rain showers may reach the northern Sacramento Valley and foothills by midday Saturday before the frontal system dissipates. Southerly gusts late Friday and Saturday may reach 25 mph in open wind-prone areas. Rainfall will generally reach a Santa Rosa to Redding to Montague. Rainfall totals from this system may reach 0.50-1.00 inches in far northwest California, while other areas that receive rain will get 0.25 inches or less. A stronger system will move in Tuesday and bring rain and mountain snow to all areas through the middle of the week.

SOUTHERN CALIFORNIA

High pressure aloft along with light offshore flow will allow temperatures to climb to well above normal today across much of the area. Offshore winds will continue throughout the day before slowly weakening this evening into the overnight hours. Expect winds of 15-25 mph with some gusts to 40 mph, mainly across San Diego County and in areas near the Banning Pass today. Temperatures will average 10-20 degrees above normal across most of the area with highs in the lower to mid 90s common over Southern California. Minimum relative humidity (RH) will drop into the 10-15% range over many lower elevation sites the next two days with poor recovery tonight. However, the San Joaquin will continue to see night through morning fog along with relatively cool temperatures. A broad trough will slowly edge toward the state later this week, leading to a return of onshore flow and cooler temperatures. Expect all offshore winds to end by Thursday afternoon. Temperatures will cool 2-4 degrees each day Friday through the weekend. After a brief warmup Monday, long range models are indicating a possibility of cooler weather along with a chance of rain by the middle of next week.
